

Project Milestone 5: Project Demo

Due. Wednesday, July 24th, 2019

For this milestone, you will demonstrate what you have worked on this semester. You will be graded on the amount of effort, the success of the project, and the use of the tools and methodologies you have learned in this course.

What To Do

Part 1: Documentation

Step 1. Create a document containing the following information about your project:

1. Project name
2. Names of all your team members
3. A link to your project in your project tracker (i.e. Pivotal Tracker)
4. A screenshot of your project inside your project tracker. The screenshot should show the sprints and features (i.e. user stories) you have completed.
5. A link to your GitHub repo.
6. A description of how to build and run your project. Imagine someone else downloads your GitHub repo. What do they have to do in order to get the project running on their computer?

Step 2. In your GitHub repo, create a README.md file that explains what your project is about.

Part 2: GitHub README.md

Sign up to demonstrate your project in class [here](#).

What To Turn In

As a group, you will submit a single PDF document named "<Team Name>.pdf" containing the information from Part 1 above.
